

Web-CAT Grading Information

When you log into Web-CAT (<https://web-cat.cse.buffalo.edu:8443/Web-CAT>), you can select from the Results menu to "View Most Recent Results" or select "Past Results" to view past results.

This will bring you to a page that has the following headings (some may be expanded already).

The first block of text (Result Summary) when expanded will look something like this and it tells you about your total score on the assignment:

Assignment	CSE 113(Spring2010-Decker-CSE113): Lab 2 test grading try #3
Name	Gene Wang (zgwang)
Submitted	03/26/10 12:29PM, 31 days, 11 hrs, 15 mins early
Total Score	87.0/100.0

Score Summary

Correctness/Testing:	87.0/100.0	<div><div></div></div>
Final score:	87.0/100.0	<div><div></div></div>

Position in class:

► Graphs

If you are interested in further details about what you did not earn full credit on, open the block that says "Estimate of Problem Coverage". In that block of text, you will see some descriptions of the testing and a listing of sentences that actually are the outputs from the tests that were run on your code:

► Compilation Produced Warnings

▼ Estimate of Problem Coverage (87%)

Problem coverage: 87%

For this assignment, the proportion of the problem that is covered by your solution is being assessed by running a suite of reference tests against your solution. Test results indicate that your code still contains bugs. Your code appears to cover **only 87%** of the behavior required for this assignment.

Double check that you have carefully followed all instructions that are requested in the assignment in setting up your solution, and that you have also met all requirements for a complete solution in the final state of your program.

The following hint(s) may help you locate some ways in which your solution may be improved:

- The hero should have wrapped around when it reached the top edge, but it did not. The hero should have wrapped around when it reached the left edge, but it did not.
- The method should be named checkForGoldBall, however, you named the method checkForGoldball
- The method should be named checkForMushrooms, however, you named the method checkForMushroom

Each bulleted "hint" as they are called corresponds to one failed test. If you would like to read further about the tests, please look at the posted grading guidelines for the particular assignment. If you feel that there has been an error with your assignment, please make sure to contact the grading TA.
